

GOOD INTERNET, BAD WI-FI?

Does the following
'the Wi-Fi's not working, we can't...'
or
'there's a problem with the internet,
we can't...'
sound familiar?

There's a world of difference
between a good internet
connection and good Wi-Fi.

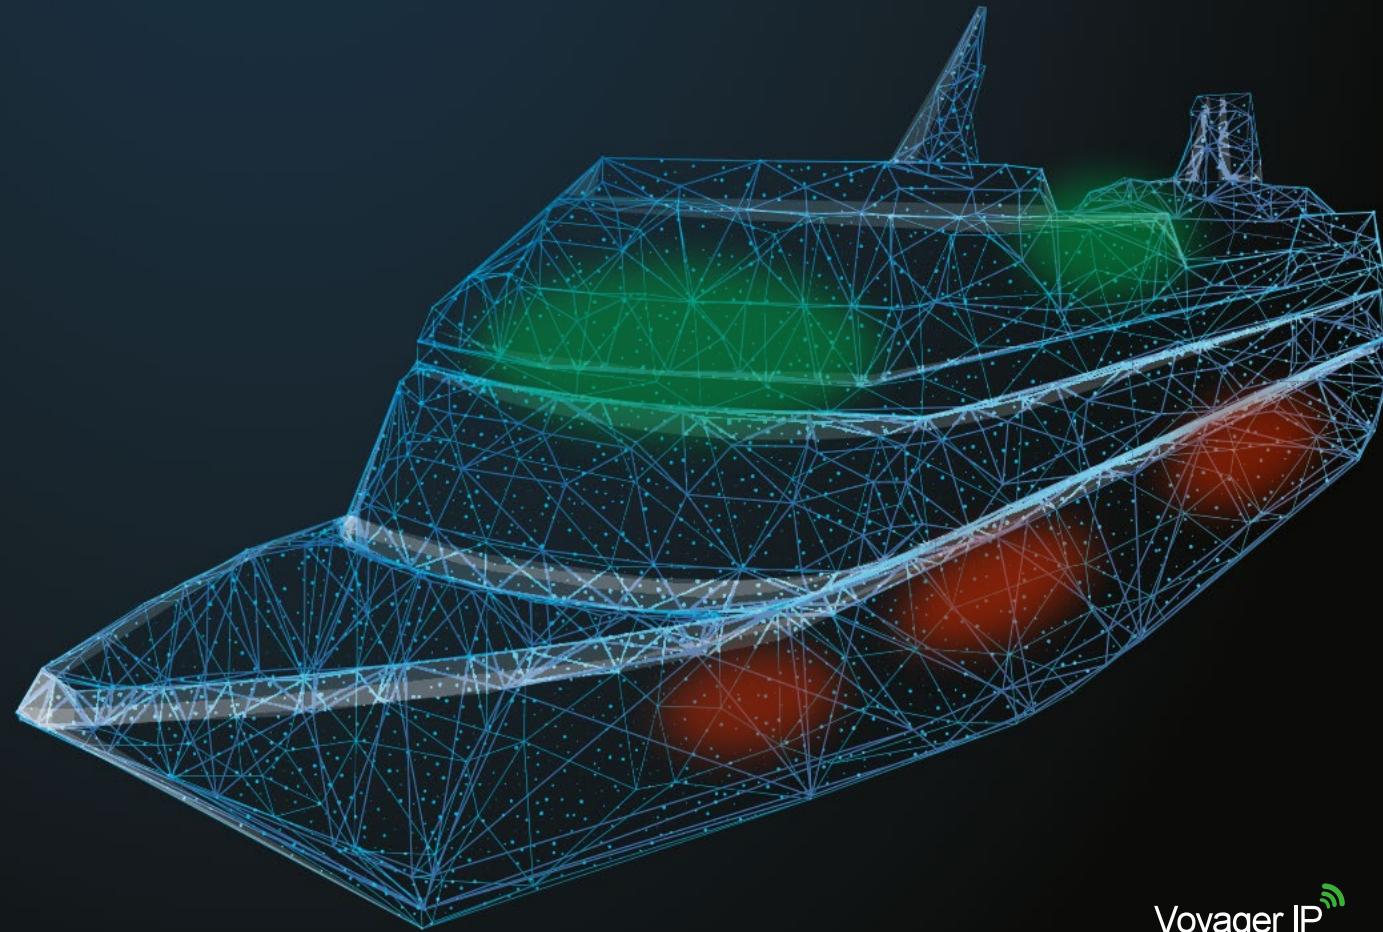

Wi-Fi is at the frontline of your onboard guest experience.

If it is not working to the best of its ability, it makes no difference who or what else is.

A fast, reliable wireless network across a vessel is a complex challenge.

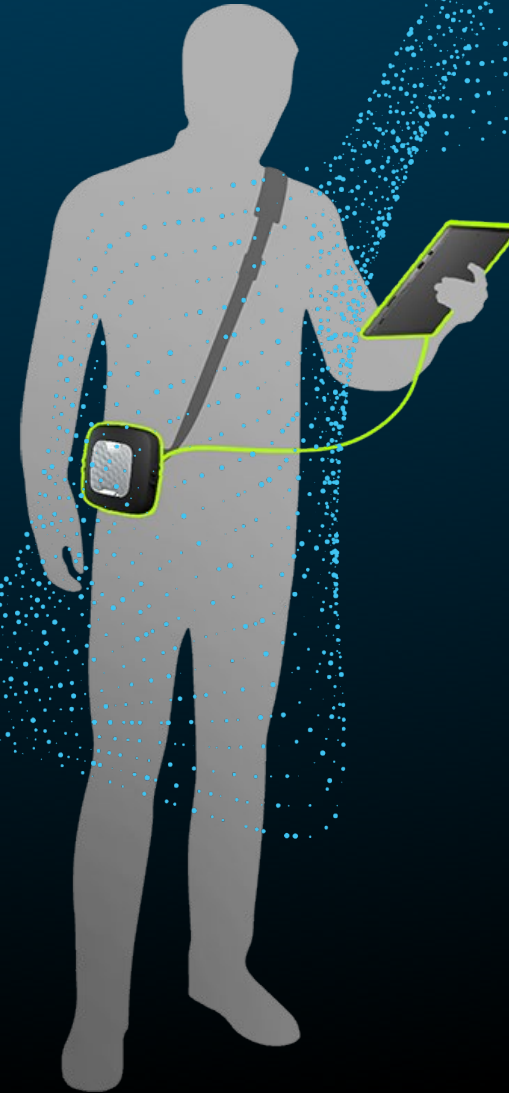

- Signal interference
 - Dead zones
- Signal to noise ratio
 - Jitter

THE SOLUTION?

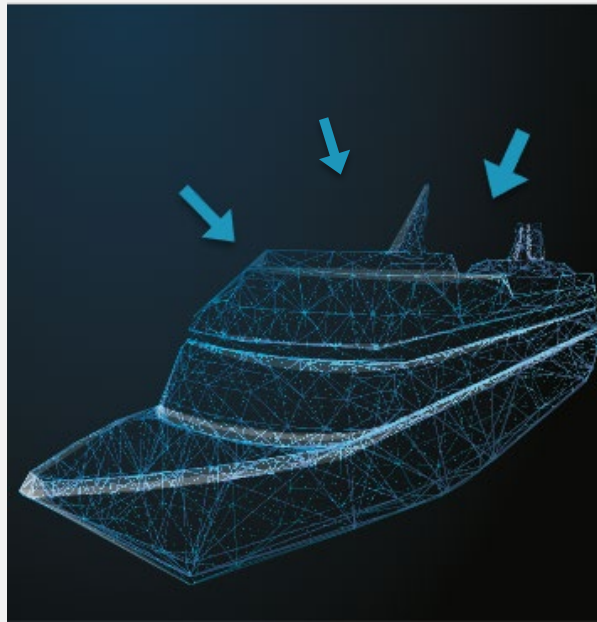

Voyager IP is now partnered with Ekahau, the world leader in wireless network diagnostics. Trusted by the world's biggest brands and most important events for mission-critical wireless networks.

Voyager IP delivers fast, accurate and precise Wi-Fi diagnostics with in-depth site surveys and comprehensive spectrum analysis, resulting in more accurate and reliable data.

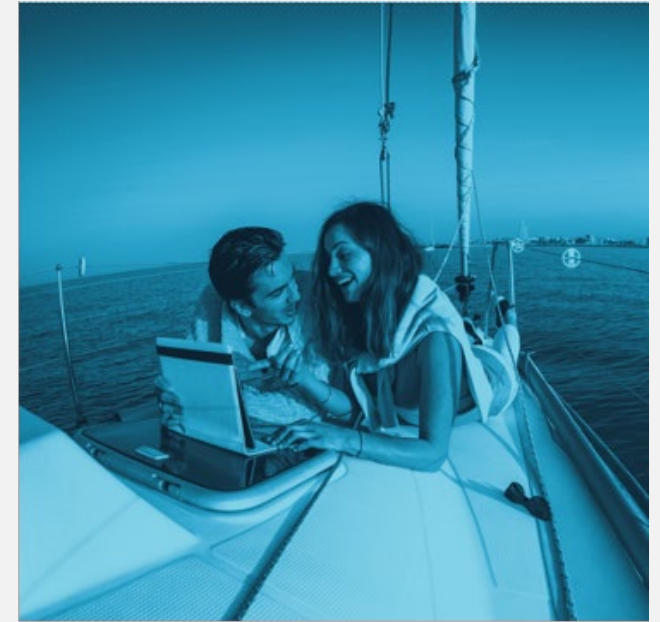

Our partnership with Ekahau will ensure that your onboard Wi-Fi capabilities will meet all your needs.

We can diagnose your problems and accurately design a high capacity Wi-Fi network based on your requirements.

We ensure that your onboard Wi-Fi is optimised and performing as it should.
